

Al U-Died, Qatar.

Shape Services Ltd provide personnel for high risk areas where individual security clearances are required to work in sensitive areas, line of sight surveys, installation of Eriksson mini-links and the erection of portable masts on the military bases. Al U-Died is one area where Shape is involved.

These types of contract place demands on both personnel and equipment as you are unable to 'pop round the corner and get any additional required kit from B&Q' Subsequently, detailed planning is essential to ensure the correct equipment for the task in hand is delivered to theatre

Portable towers are a cost effective way of installing microwave links in locations where operational requirements dictate constant moves. Subsequently both the tower and link can be dismantled, moved and erected around sensitive 'In theatre' areas.
